CAROUSEL Armchair
Design: Gunilla Allard, 2018

LAMMHULTS

MAXIMUM COMFORT IN A COMPACT FORMAT

Carousel conference chair, designed by Gunilla Allard, provides maximum comfort in a reduced format. The fully upholstered shell chair (4-feet and 5-feet bases) is equipped with a 360° comfort tilt, giving the seat shell multi-directional movement, while the 4-leg version comes with flex motion. This feature creates a very gentle and flexible motion for the user. The wing-shaped armrest gives character and adds comfort to the soft enclosing seat shell.

Carousel's construction allows active sitting on three levels: horizontally with the seat's rotation, sagittally with the forward and backward tilt, and on the frontal plane which allows lateral movement for the lumbar spine.

"The name Carousel describes the feeling of the furniture well: a softly embracing seat that swivels on its pillar frame."
"

— Gunilla Allard, Designer
