

A22 Stool / Barstool
Design: Anya Sebtov, 2022

LAMMHULTS

DESIGNED FOR IMPROMPTU MEETINGS

A22 is a stackable, highly versatile stool designed for impromptu meetings and quick breaks in dynamic environments — at home or at work. Its comfortable seat is angled slightly forward to encourage occupants to stand occasionally and do their bodies a favour. To facilitate recycling and reuse, the stool is made entirely of steel, without any bolts or screws. A22 can be used both indoors and outdoors.

The leg frame consists of curved steel tubes in three different diameters. This inter-play of thinner and thicker lines gives A22 its striking graphic character, which is accentuated by the seat surface's laser-cut pattern. It is also designed for movement and change. A gap between its tubular frame and the back edge of the seat creates an integrated handle for easy moving and lifting. An add-on cushion simply wraps over the seat surface like a scarf. A22 is available as a stool or a barstool.

“My aim is to create long-lasting products by combining durable materials with timeless design.”

— Anya Sebton, Designer

SPECIFICATIONS

STOOL / BARSTOOL

Frame of Ø25 & 20 mm powder coated steel tubing, footrest of Ø15 mm galvanized steel tubing. Glides. Seat of 3mm powder coated perforated sheet steel. Loose reversible pad as an option. Stackable.

Seat pad suitable for outdoor use, available in standard colours Graphite and Macadamia. The seat pad for outdoor use has a high water-repellent surface and a high UV resistance, meaning it is fade-resistant with good colour fastness properties. It can be used all year round however we recommend to bring it inside or cover it during bad weather.

WEIGHT

Stool	5.0 kg
Barstool	6.5/7.0 kg
